Carlisle
Flood Investigation Report

The Cumbria Floods Partnership, led by the Environment Agency, is producing a 25-year flood action plan for the Cumbrian catchments worst affected by the December 2015 flooding, including Carlisle. The plan will consider options to reduce flood risk across the whole length of the Eden catchment. Seventeen actions have been recommended in the report to manage future flood risk, which will require the involvement of a number of organisations and local communities. One of the main actions is a review of the performance of the existing Carlisle Flood Risk Management Scheme to identify what worked well and what improvements are required for the future.
